

# WEEKLY WEATHER BRIEFING

2:00 PM CDT  
Thursday, June 30, 2022

Prepared by:  
NWS New Orleans/Baton Rouge

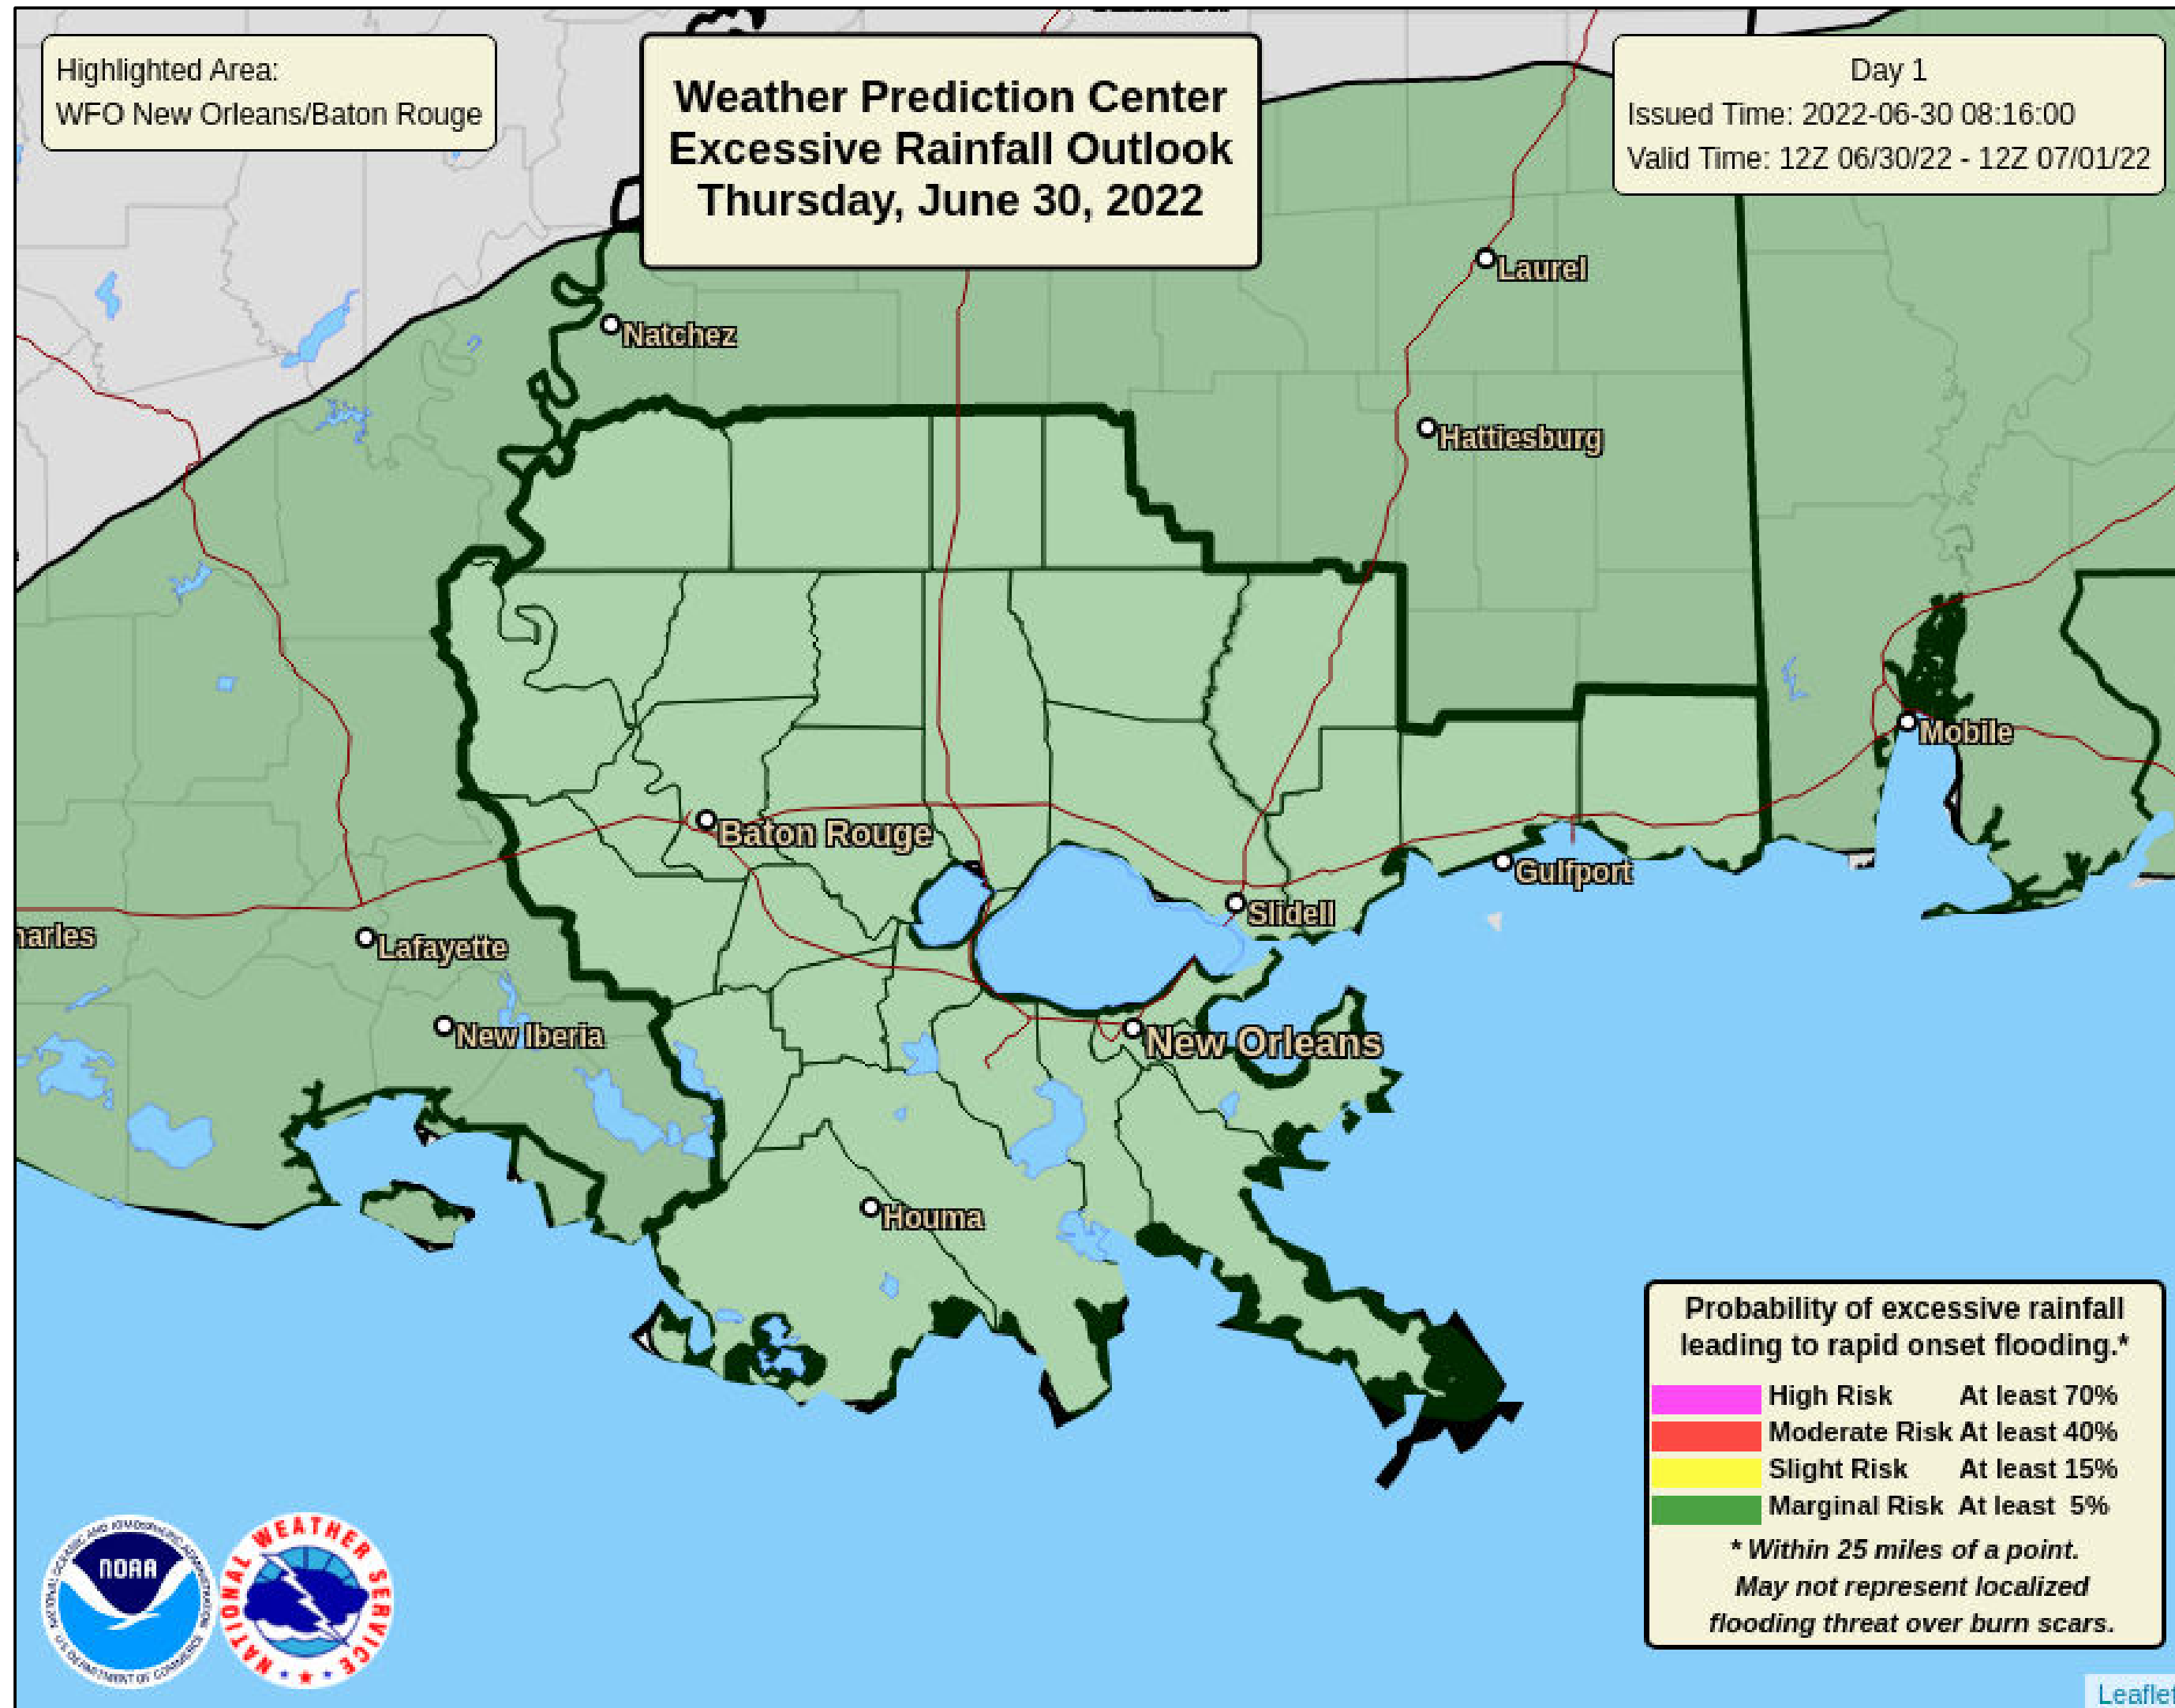

# Situation Overview

- A summer-like pattern for the next few days, with showers and storms popping up late morning through the afternoon each day.
- Heavy Rain will be the main threat of the forecast.
- The tropics are active, but no local impacts.
- An uptick in temperatures is expected next week.

# Excessive Rainfall Outlook

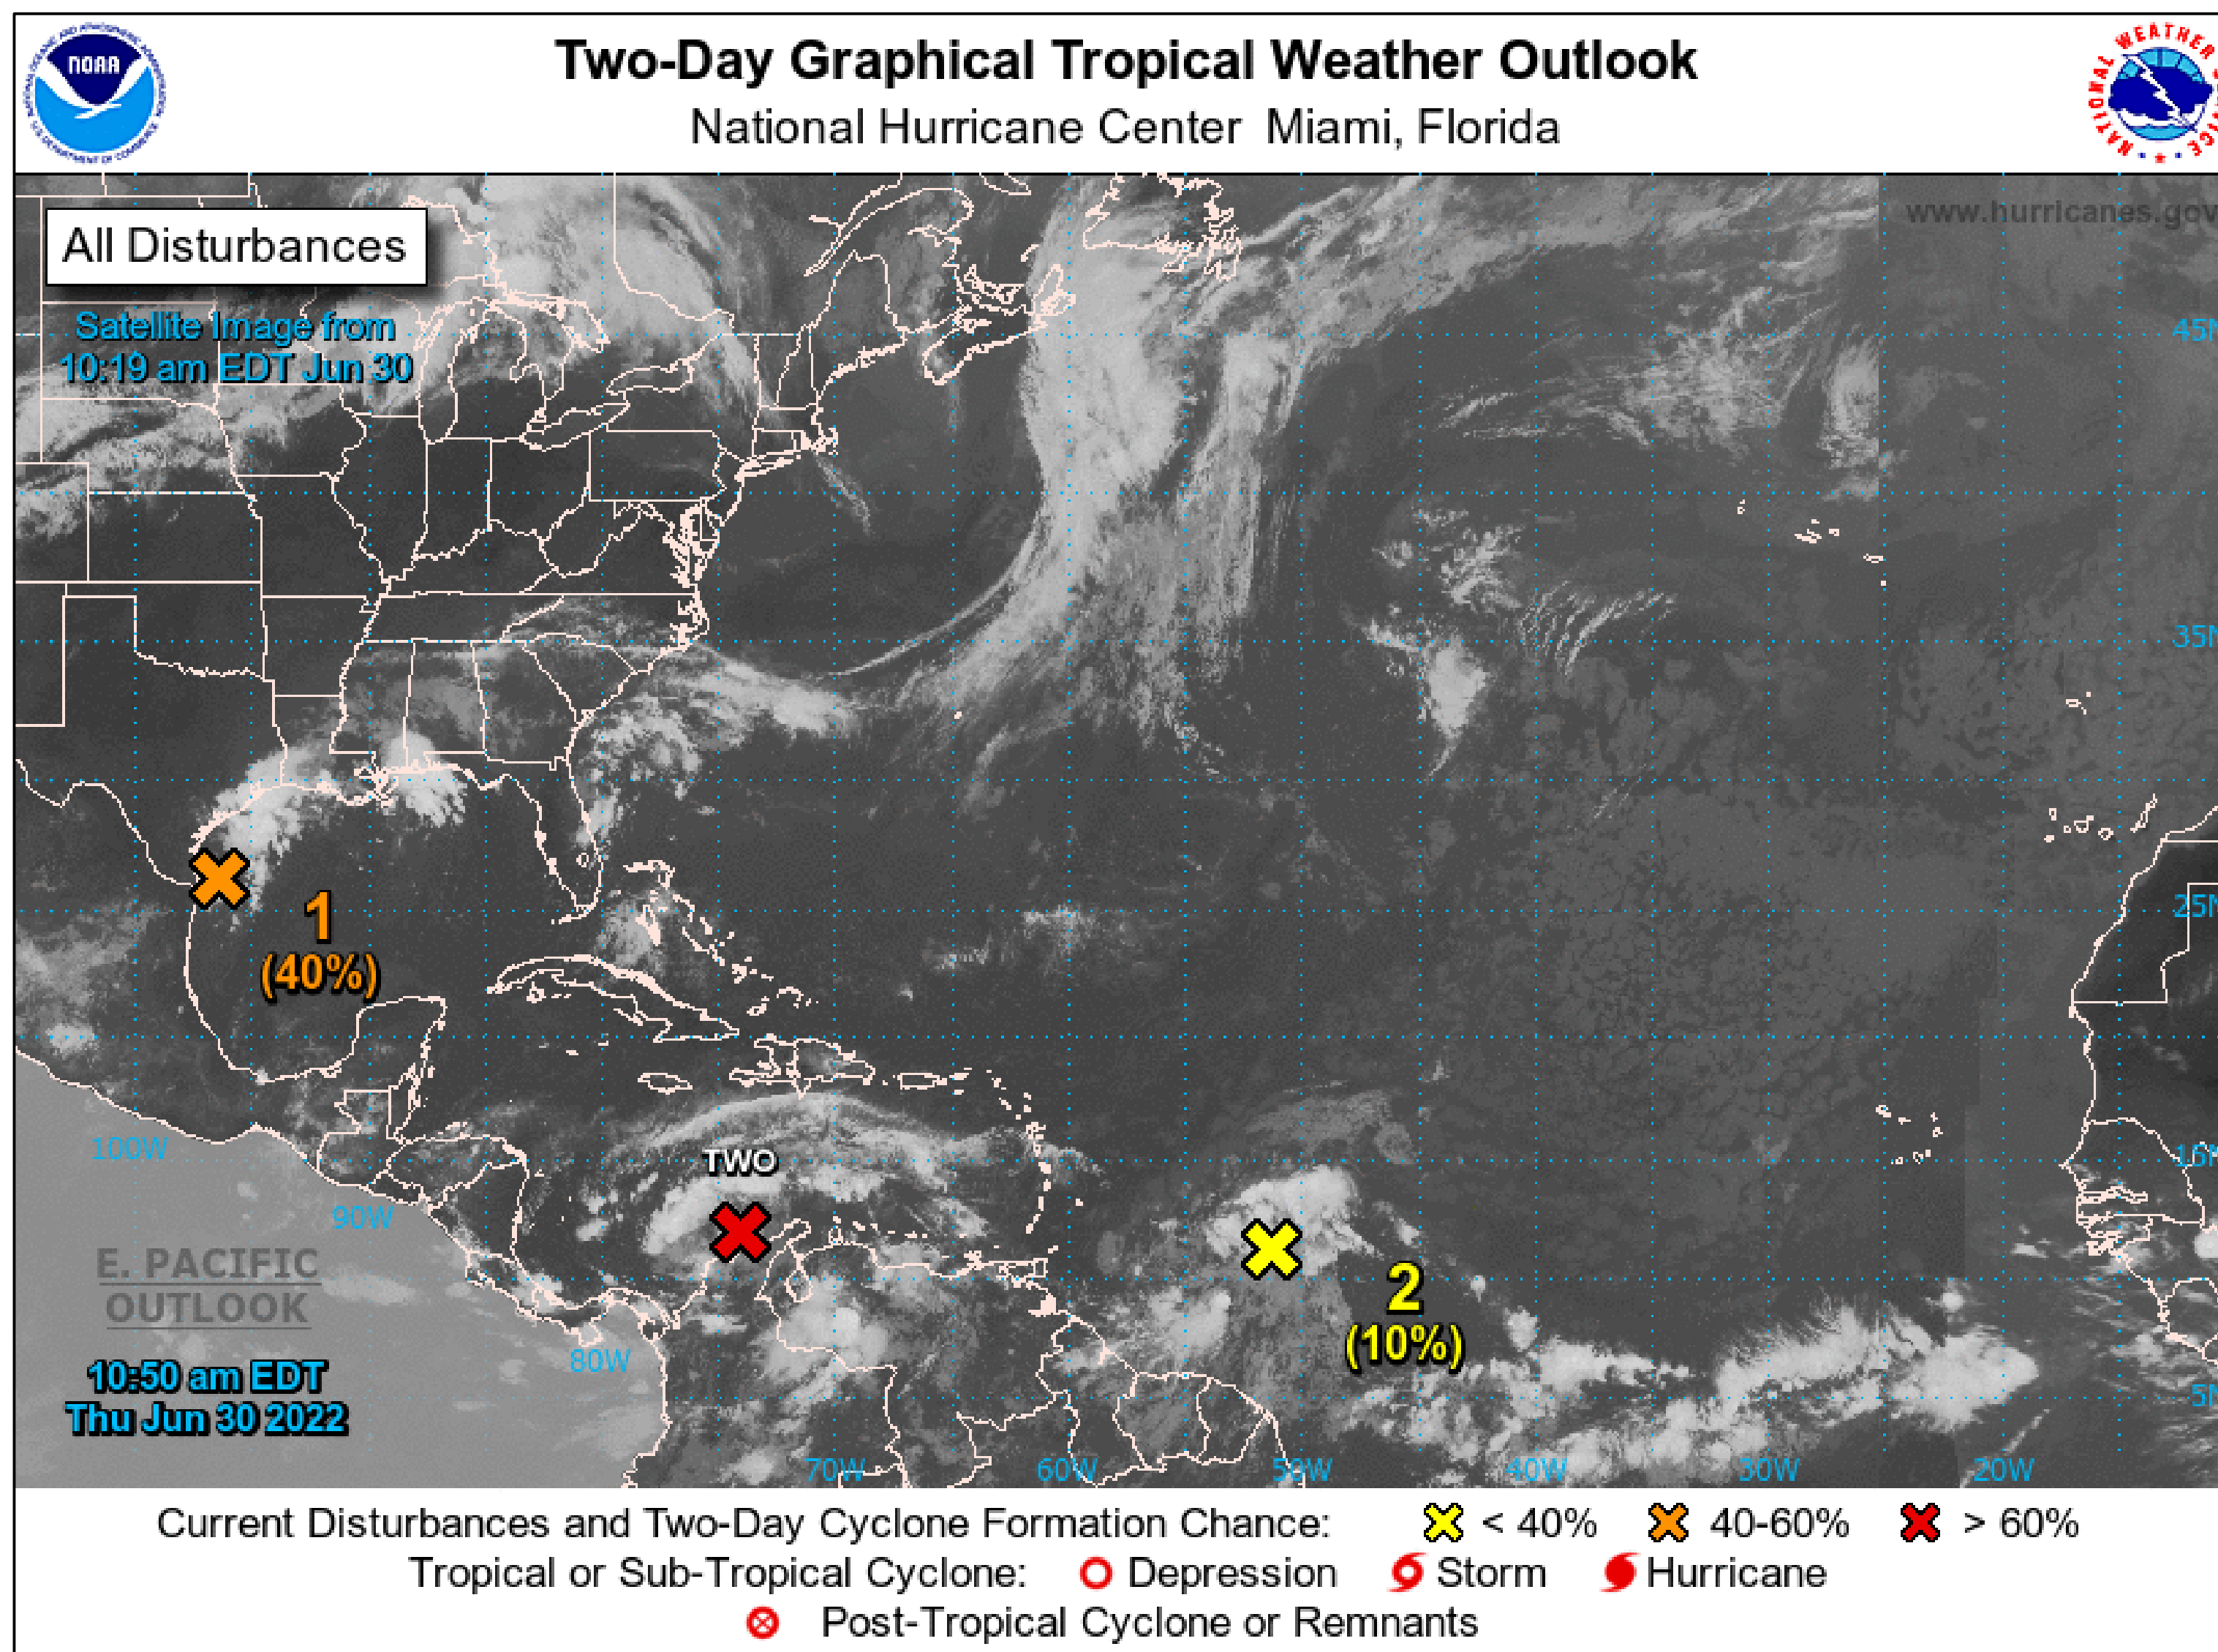

Valid through 7AM Friday

- We have a Marginal Risk of excessive rainfall today through Saturday.
- The entire CWA is under the risk each day. Rainfall rates of 3-4 in/hr could bring some localized flooding
- The main timing for any showers or storms that may bring this risk will be late morning through the afternoon.
- Average rainfall will be around 0.5-1.5 inches, but locally higher amounts are possible.

# Tropical Weather Outlook

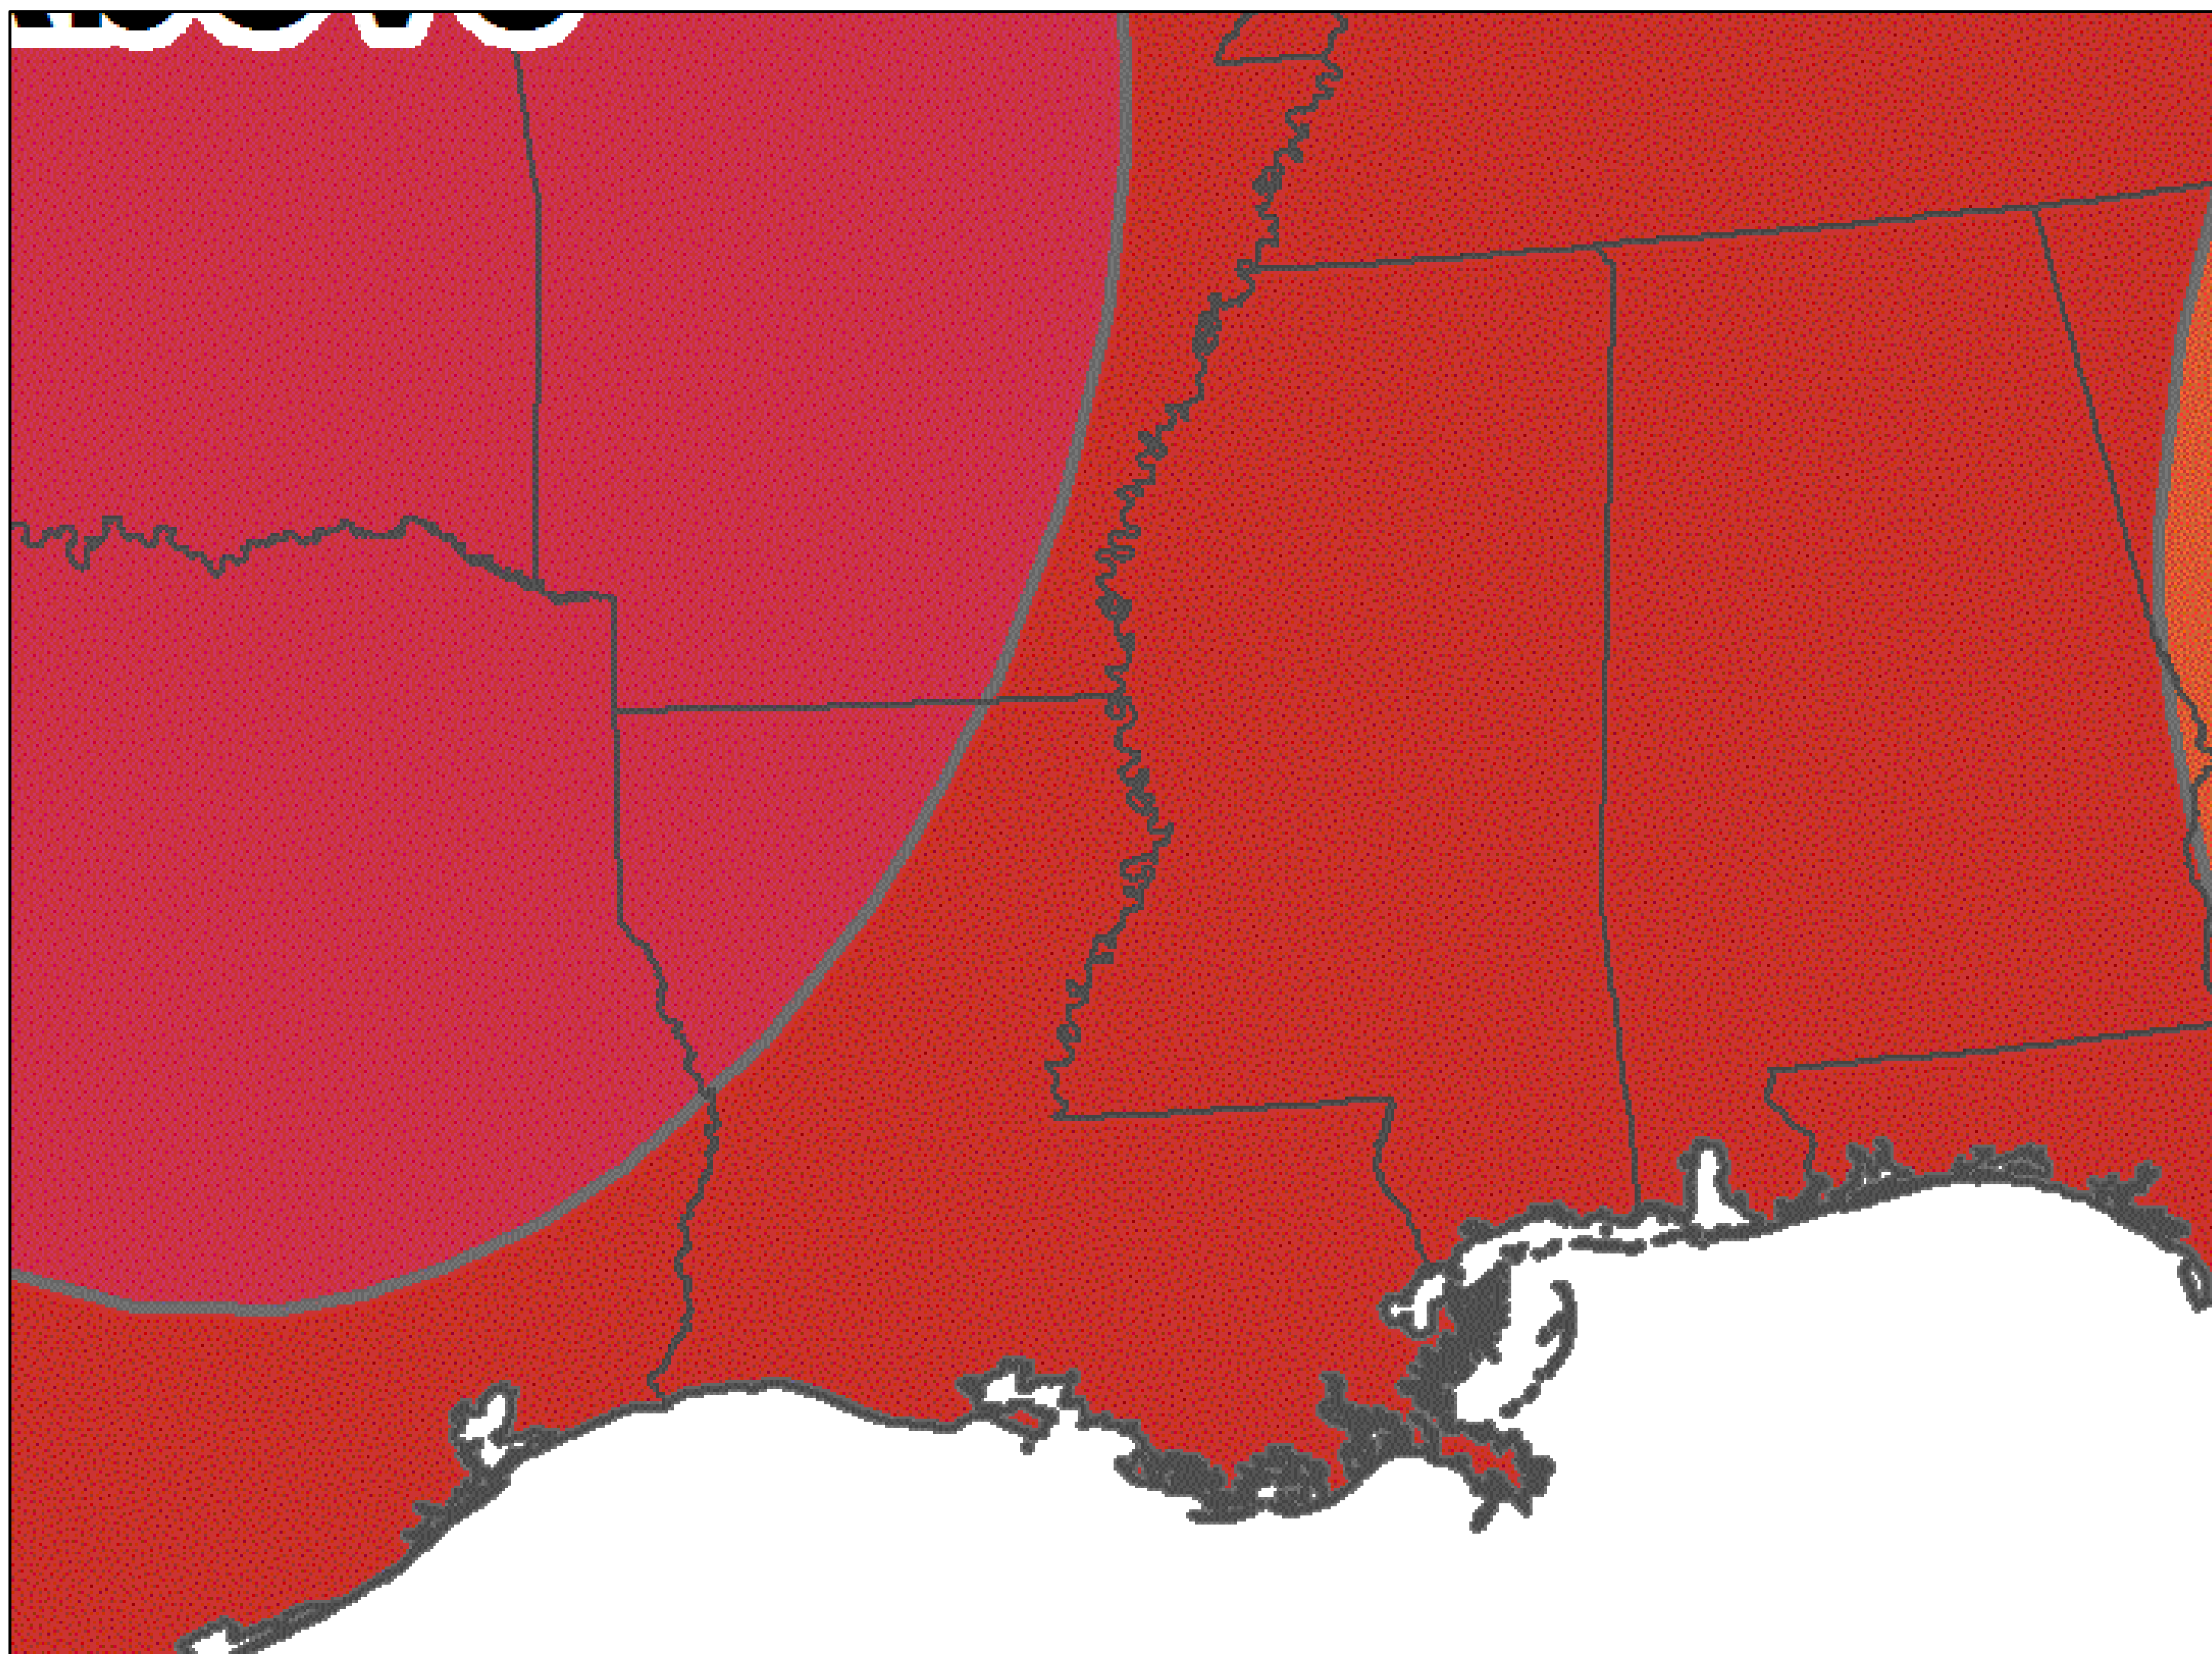

- The tropics are active, but for now no local impacts are expected from any of these systems/disturbances.

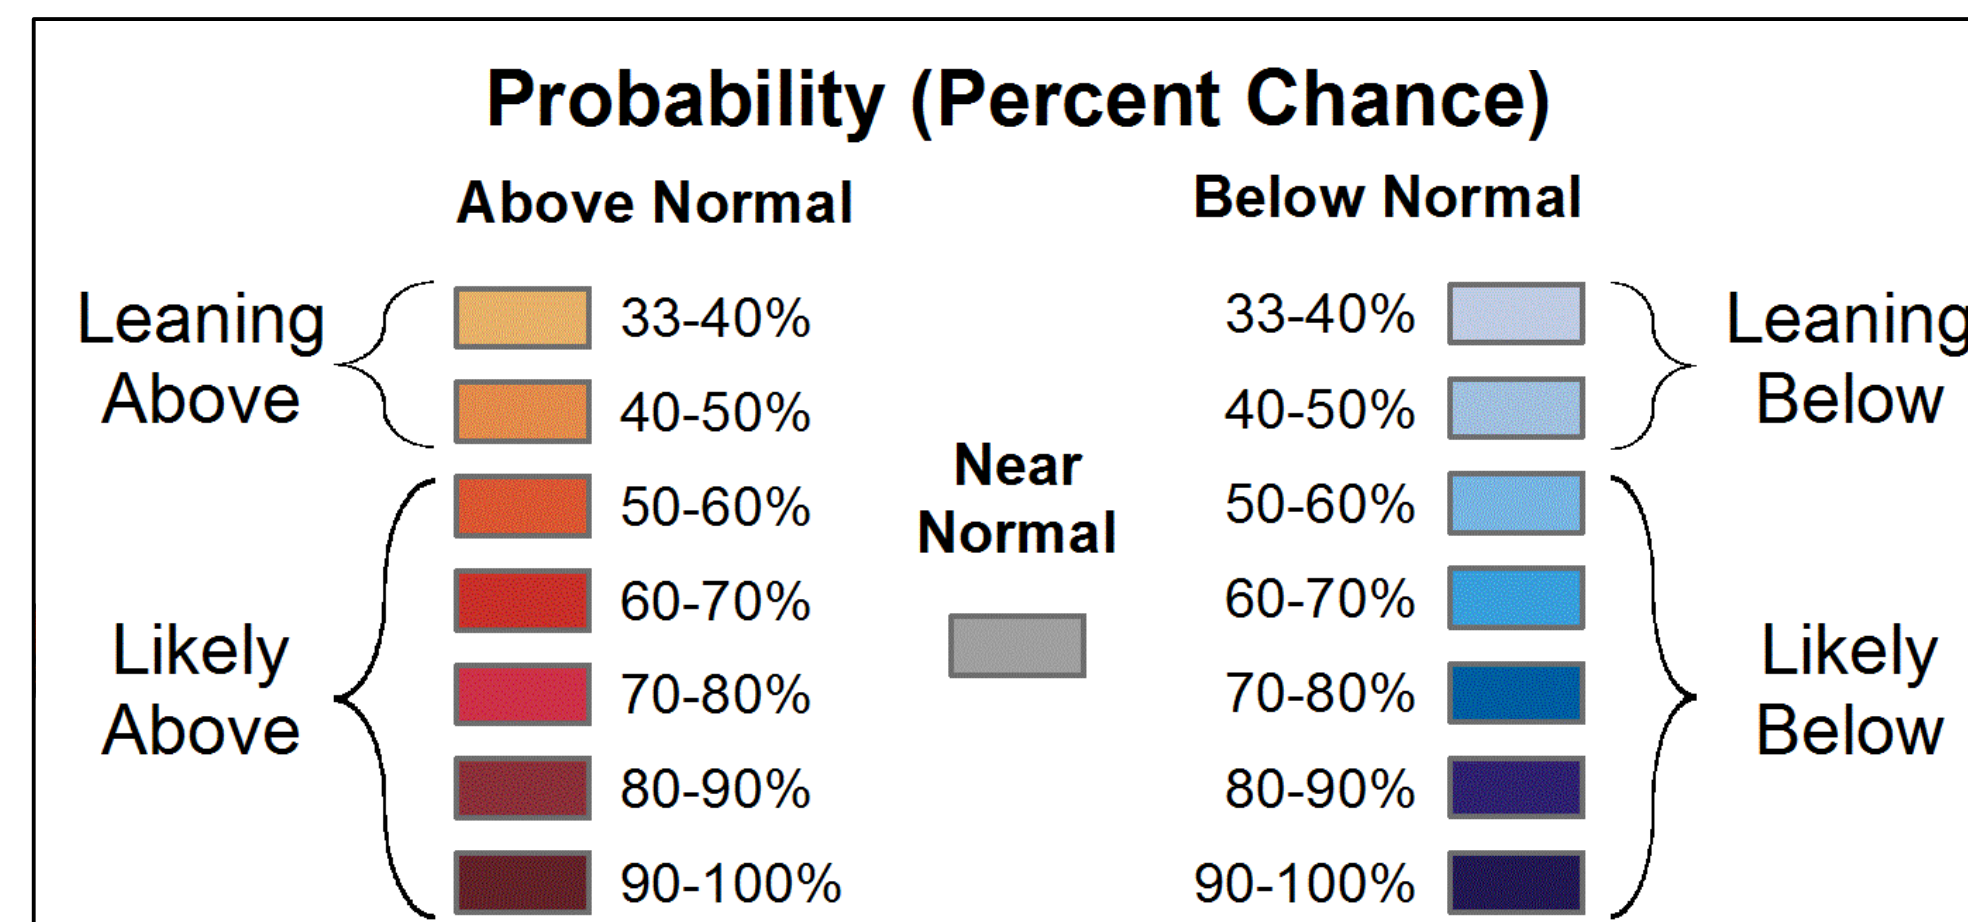

# Day 6-10 Temperature Outlook

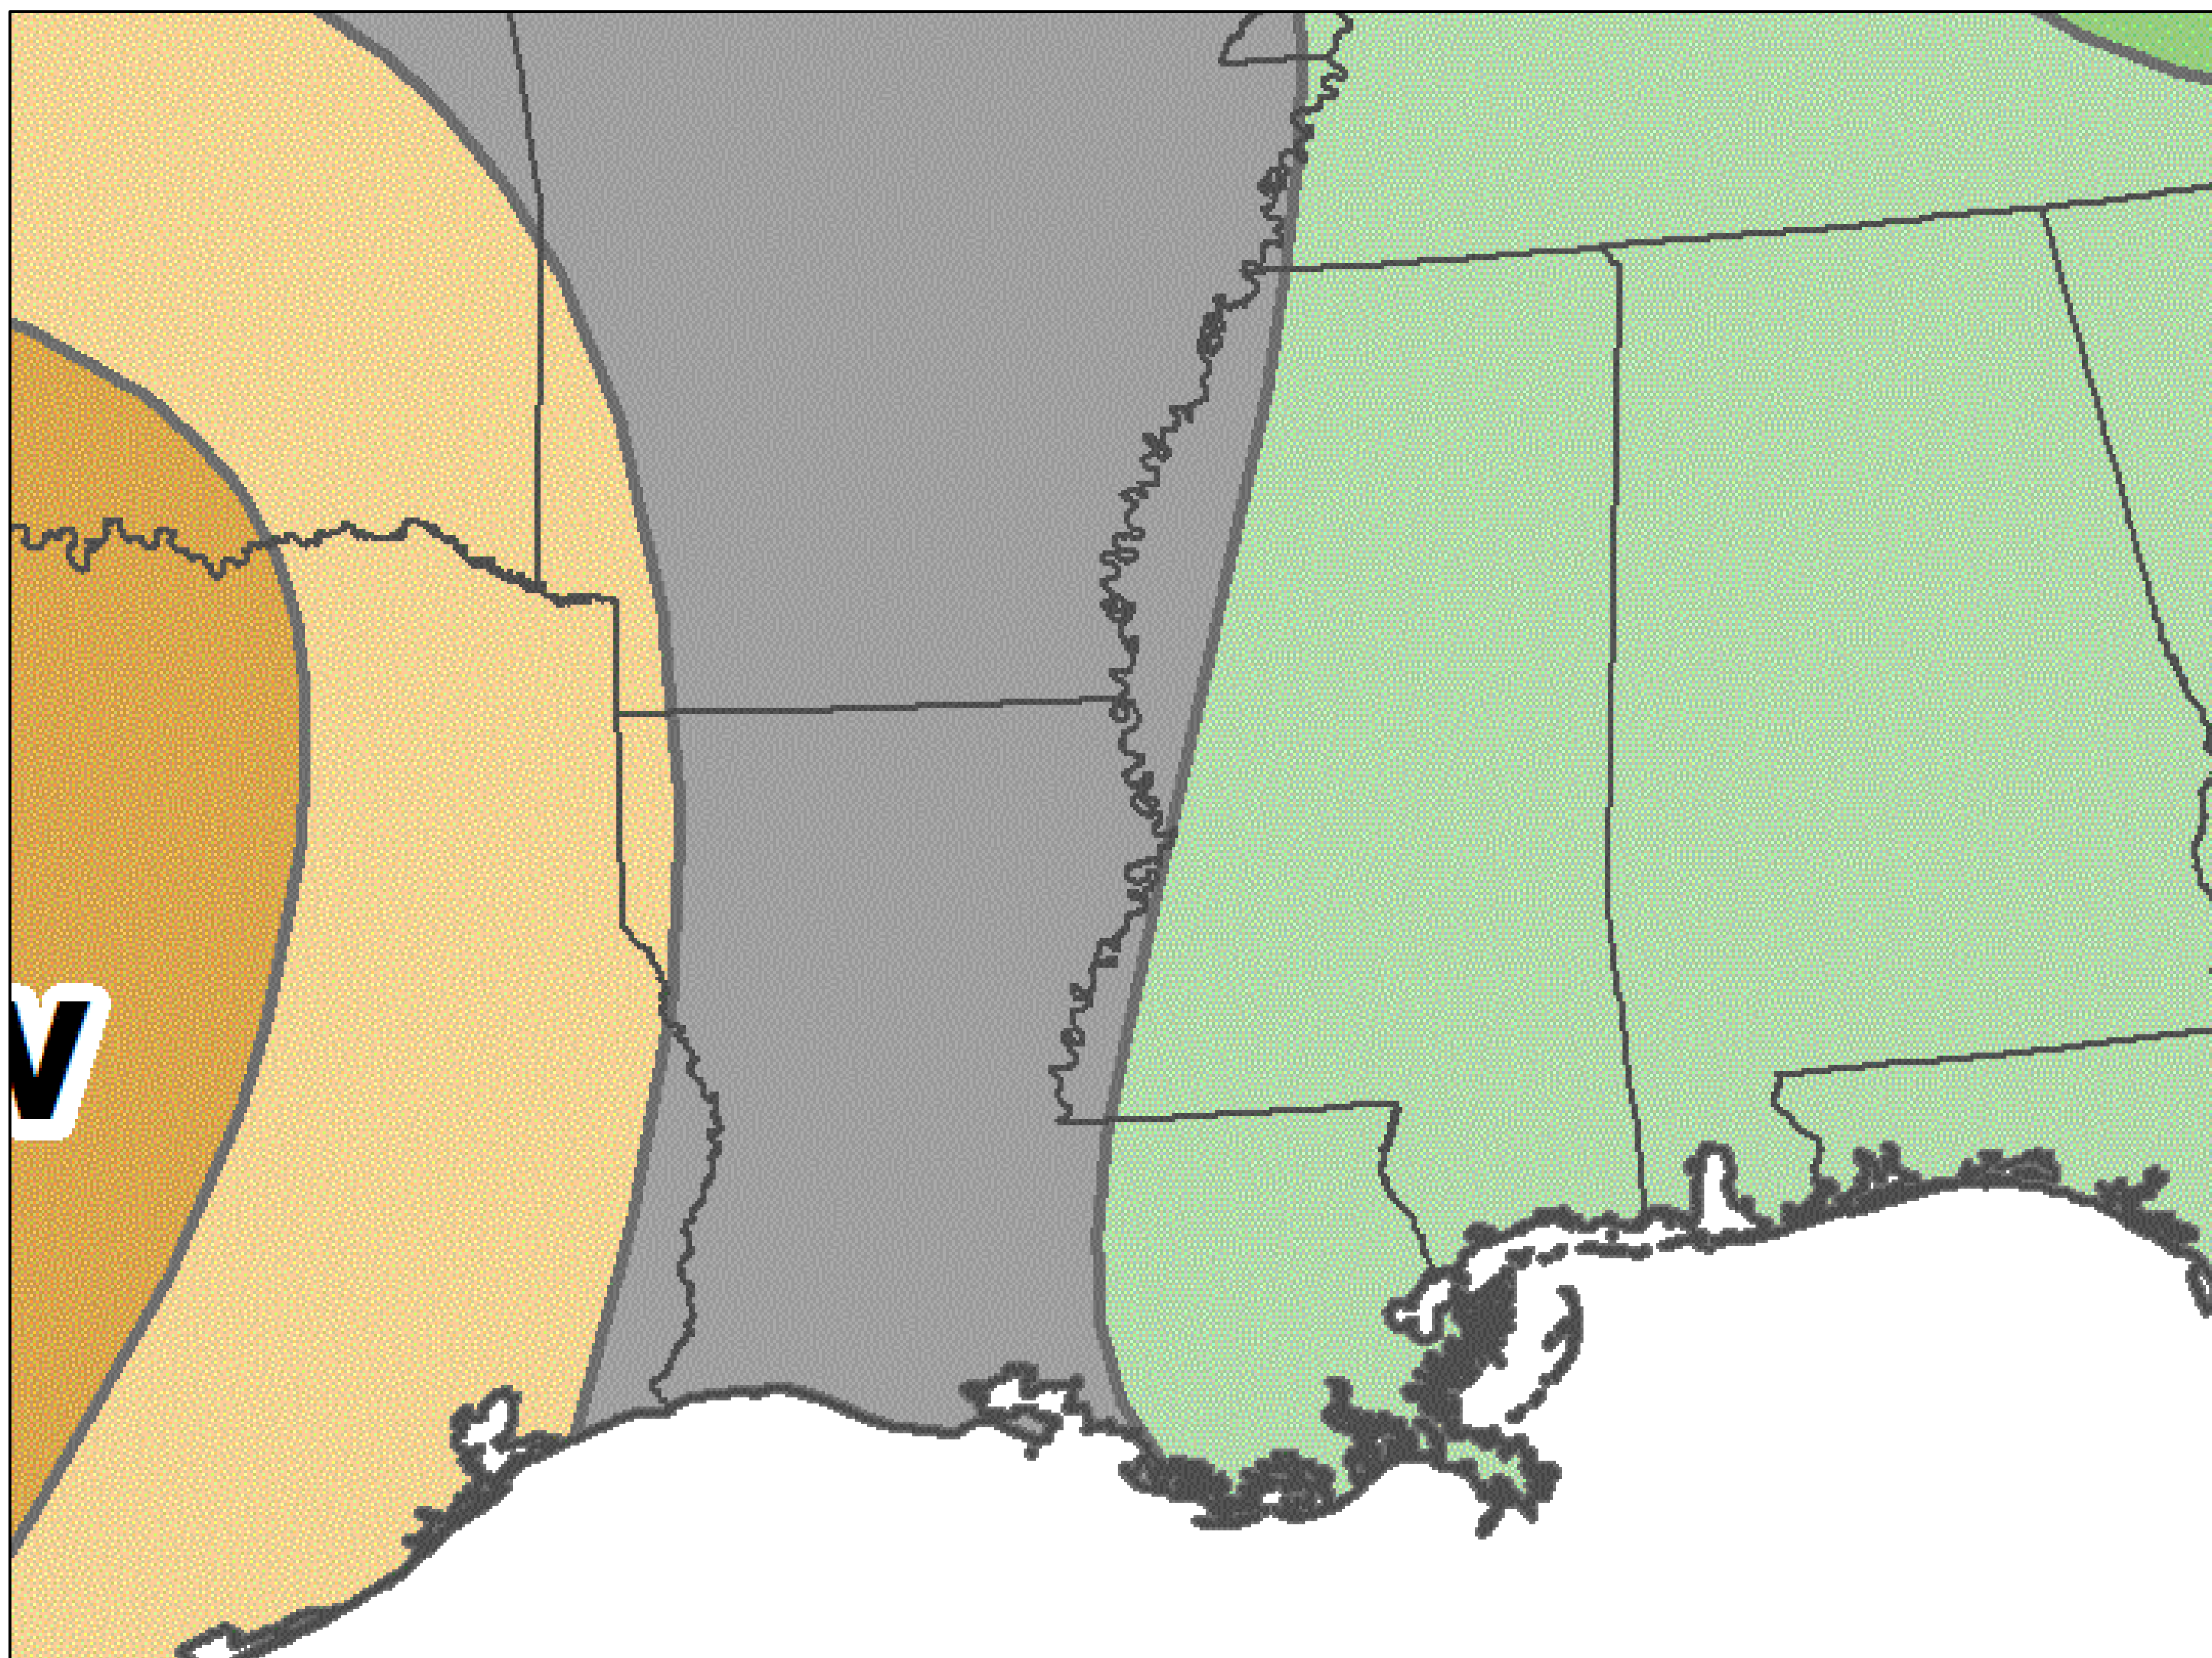

- Temperatures are expected to increase again next week.
- This will be most likely in areas that do not see as much rain coverage.

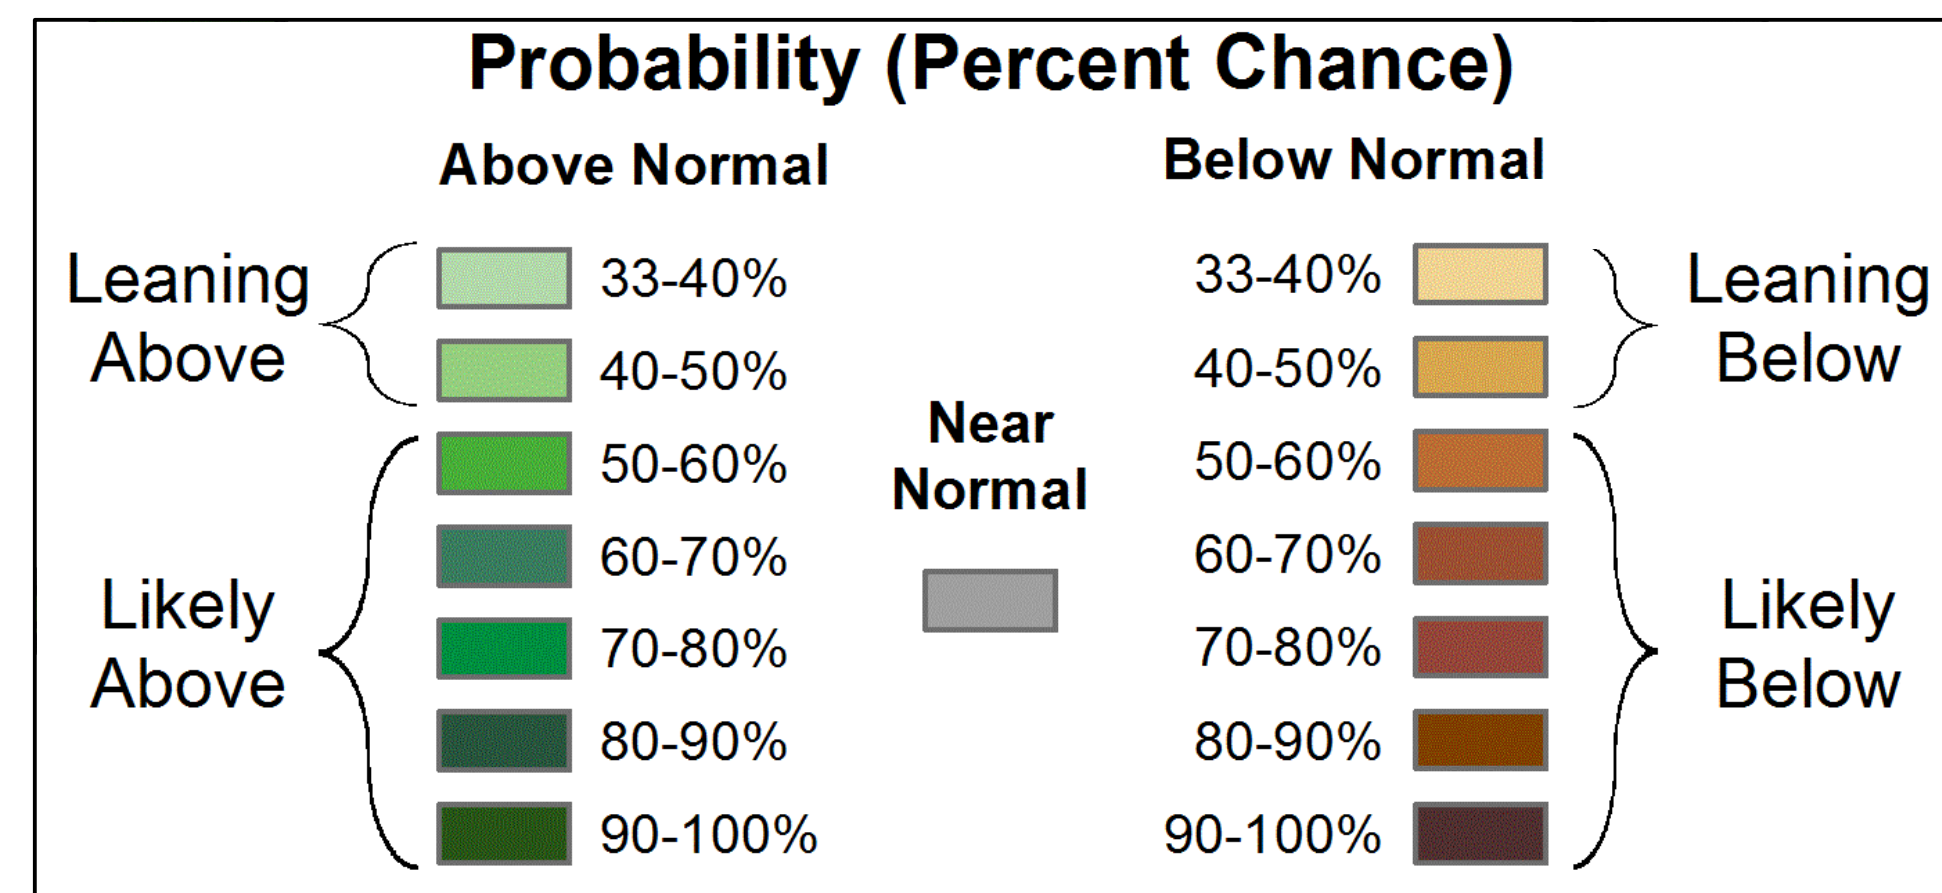

# Day 6-10 Rainfall Outlook

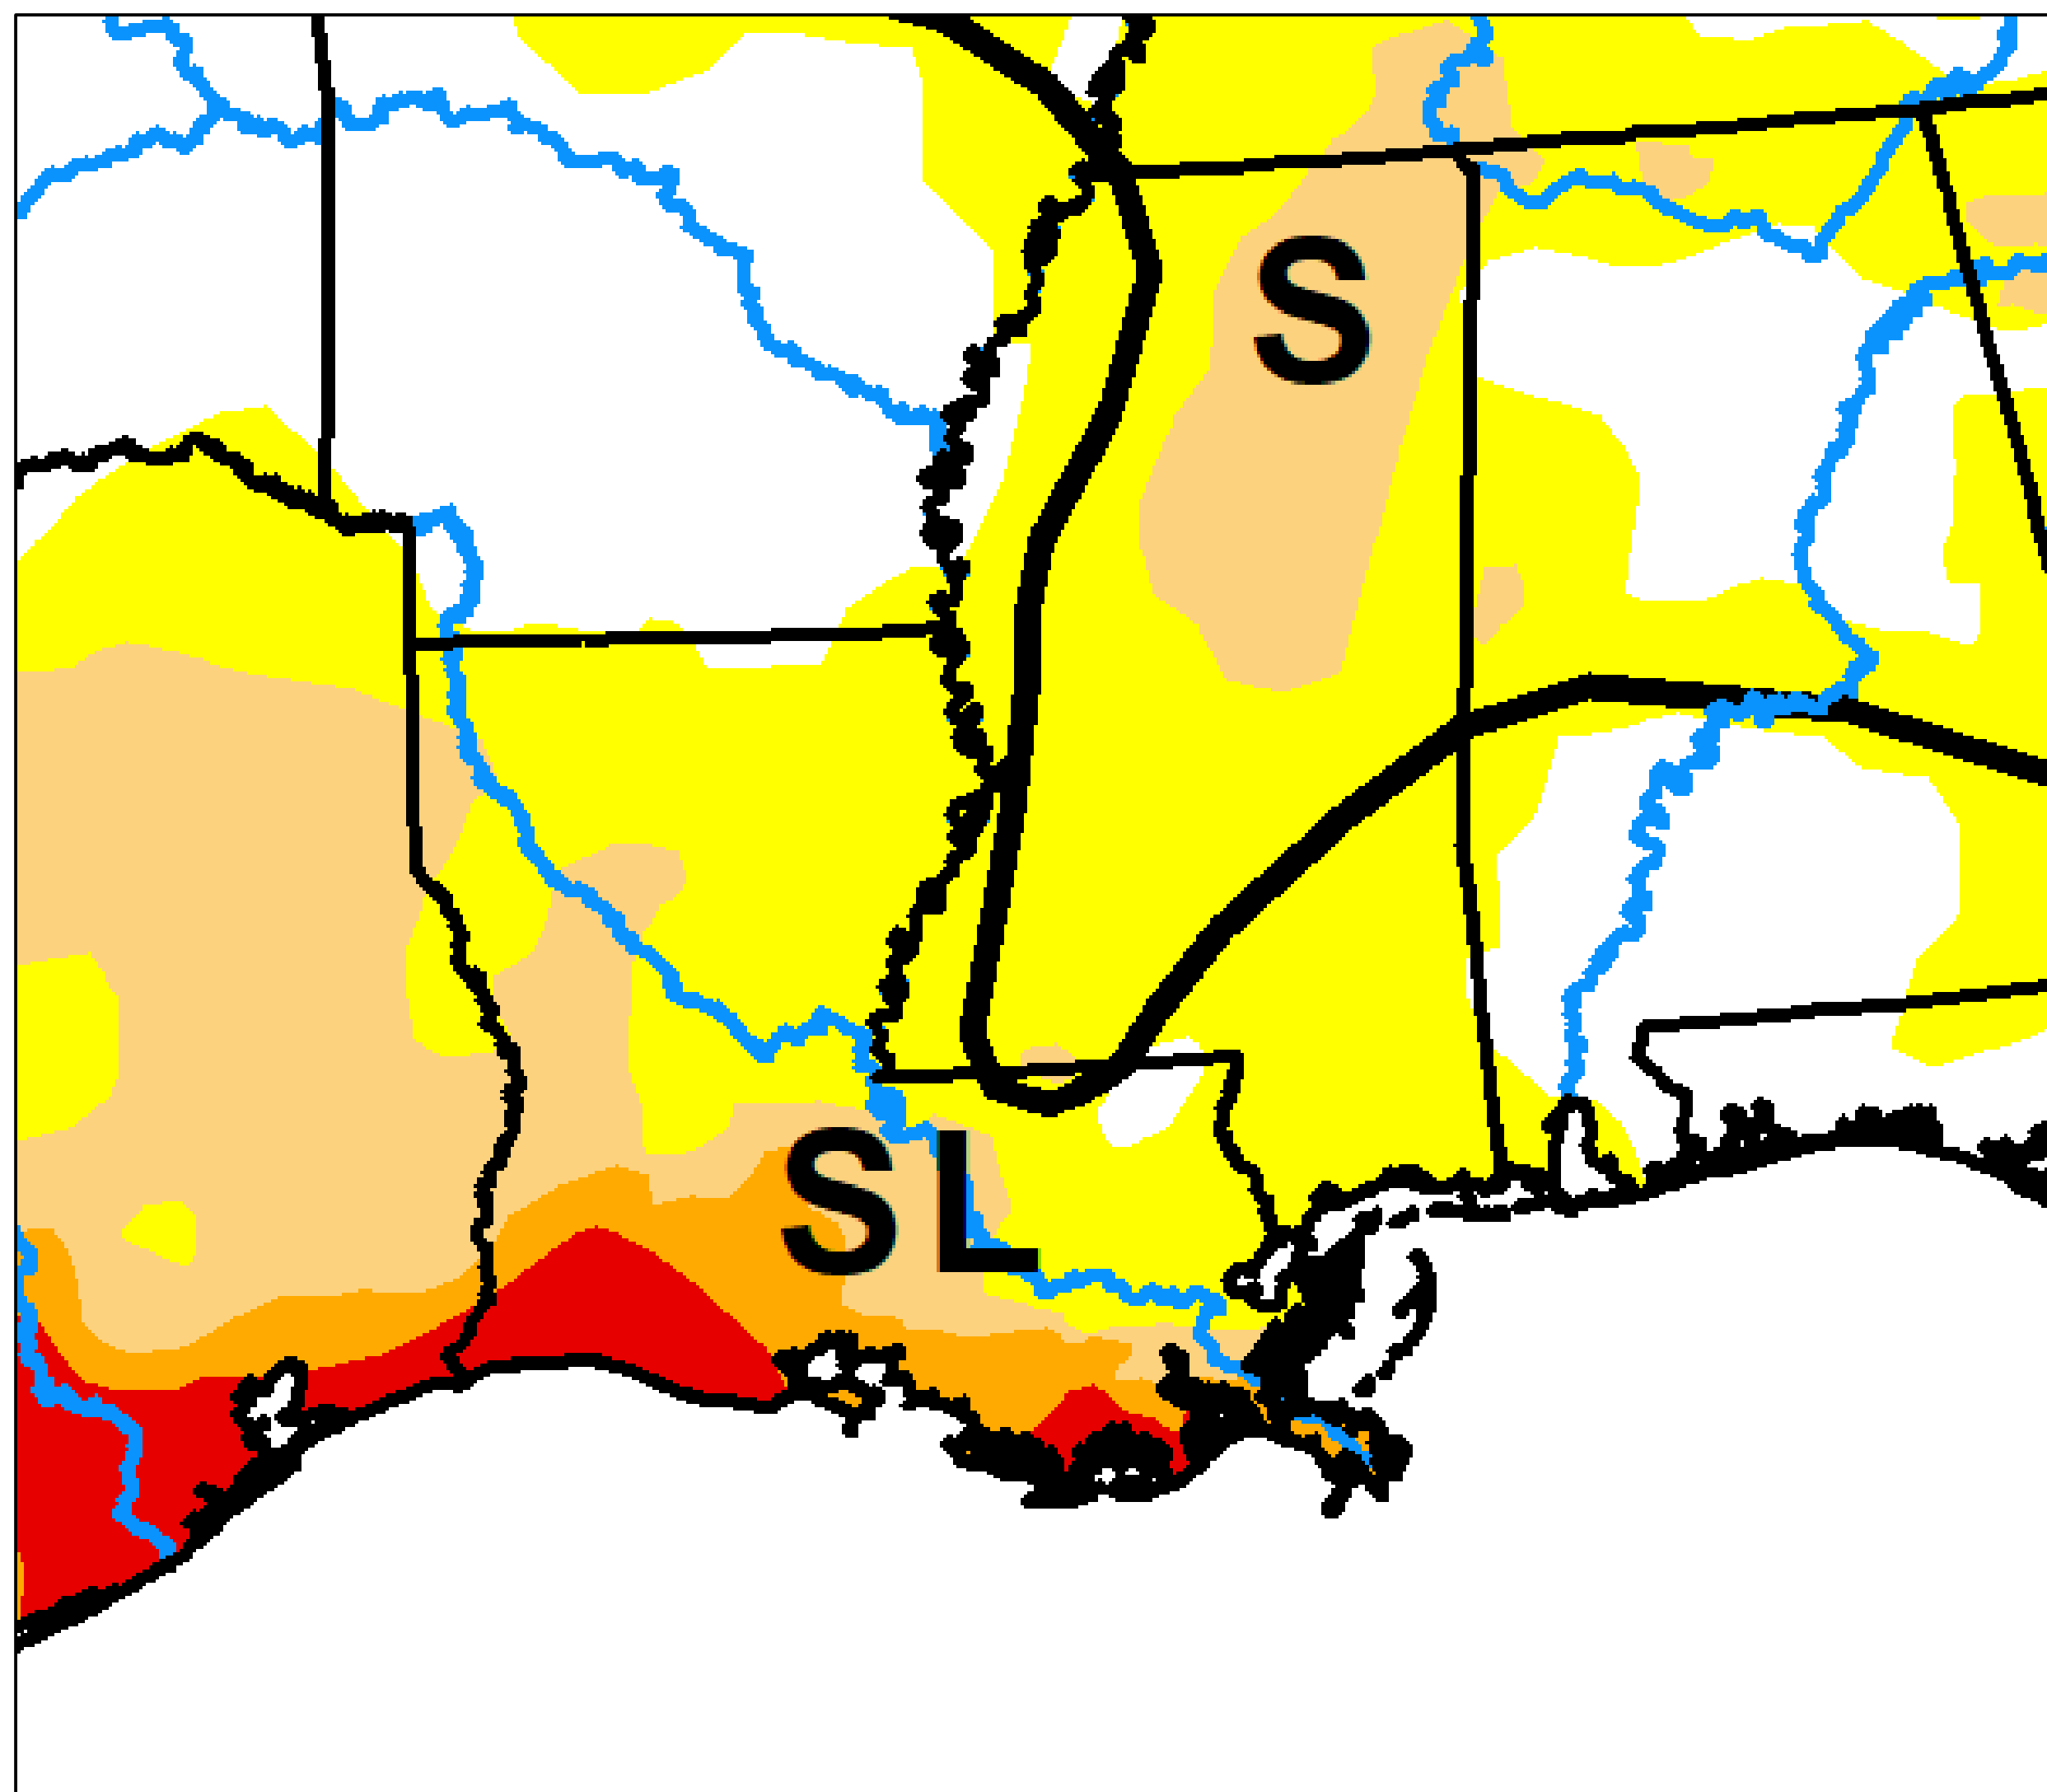

- Still leaning above for rainfall in the extended period as tropical moisture looks to hang around.

# Drought Monitor

- Most places still abnormally dry or in drought, but this does not include any of the heavy air from the last couple days.
- Next week's graphic should look a little better with all the rain we're having.

Intensity:

- None
- D0 Abnormally Dry
- D1 Moderate Drought
- D2 Severe Drought
- D3 Extreme Drought
- D4 Exceptional Drought

# Summary of Impacts

- Heavy rain will continue to be a threat over the next few days and possibly lingering into next week as well.
- Tropics are active, but no local impacts are expected.
- Temperatures look to trend up some into next week.
